

Gary Douglas Engineers Ltd

NZTTMF Member Since: 2001

Gary Douglas Engineers was and is a family business, with the personal, day-to-day involvement of company principal and founder Gary Douglas a cornerstone of their operation. And their success.

Manawatu-based, Gary Douglas Engineers started in 1972, initially building concrete batching plants, then branching out to add structural steel for commercial buildings and general engineering.

Later, Gary moved the company into transport engineering.

The move was successful; transport engineering is now the core business, and the company offers a comprehensive range of transport services, including: truck bodies, heavy trailers chassis modifications, certified welding, profile cutting, 5th wheel tractor units, truck mounted cranes, R.O.P.S. frames.

It is also approved by the NZTA as heavy vehicle certifying engineers.

Gary Douglas Engineers has built its reputation on experience, innovative solutions and standing behind their work—100%.

Gary's staff, many of whom have been with him for 20 years or more, are highly experienced. Most are fully-qualified fitters and turners and fitter-welders. Importantly, ALL are also local, which means they know the Manawatu market well.

The company operates out of a 2000 square metre, fully equipped workshop which can handle just about anything—including heavy trailer builds. And if outwork is required, Gary simply taps into a network of suppliers in Palmerston North—just five minutes away—and the job is done.

WHO: Gary Douglas Engineers Ltd.

WHERE: Palmerston North.

WHAT: Heavy trailer builds and a range of transport engineering services.
