

Active VMA

NZTTMF Member Since: 2000

Active VMA has, over its two decades in business, evolved as one of New Zealand's leading large vehicle and machinery engineering businesses. Active Engineering Solutions Ltd now trading as Active VMA, the Rotorua-based company, managed by founding owner Ross Shultz, made its name and reputation transforming vehicles, machinery, trailers and attachments by re-engineering OEM products to suit the specialist and specific demands of New Zealand customers.

Their vehicles and trailers can be found pulling their weight in a range of New Zealand's most important, and often brutal, industries from transport and roading, infrastructure and vegetation, through to forestry and agriculture.

Ross Schultz has provided the company with a constant and consistent focus on producing quality product fit for purpose. This emphasis on bespoke production makes Active VMA an in-demand supplier to transport and machinery operators with specialist needs.

It's a niche market, but one in which Active VMA excels. And one of the reasons for that is the company's operational philosophy of working in partnership with their customers.

Ross says the investment in time "up front" followed by constant communication is the key to providing Active VMA customers with quality enduring equipment, trailers and vehicles.

"Taking that time and developing the trust right at the beginning not only delivers a better outcome immediately, it results in substantial savings across the cycle of our products.

"That's what two decades in business has taught us. Build it smarter, stronger longer."
