

Fairfax Industries Ltd

NZTTMF Member Since: 2011

Fairfax Industries is among Auckland's oldest trailer builders. Yet, it remains today, as it was from inception over 40 years ago, one of the country's most innovative.

It was Fairfax who launched and perfected monocoque seamless, frameless construction in New Zealand.

The process, then and now unique to Fairfax, remains the cornerstone of the company's operation and the basis of its reputation for building truck trailers and bodies of exceptional strength and whole of life economy.

Initially, the process was developed for the refrigerated freight industry, and Fairfax remains the foremost supplier to that industry. However, over its 40 years Fairfax has also built upwards of 4000 bodies of various types, including semis, livestock crates, buses, motorhomes and ambulances.

Today, Fairfax's unique process has been refined from the patented process to the point that the company is recognised nationally and internationally for its Advanced Composites Technology (ACT).

The company employs a full-time design and development team to ensure it continues to set the pace on technological development. In addition, extensive overseas contact is maintained by the company to identify and utilise any technology and manufacturing advances worldwide.

The Fairfax Management and Engineering teams then work directly with clients to develop concepts, design, and build trailer and truck bodies that meet fully the exact needs of the client company.

WHO: Fairfax Industries.

WHERE: Takanini, Auckland.

WHAT: Leading edge technology and foremost expert on monocoque construction.

WEBSITE: <http://www.fairfaxindustries.co.nz/>

WHO TO ASK FOR: Michael Carpenter

EMAIL: michael.carpenter@fairfaxindustries.co.nz.

WHAT TO ASK FOR: The company's expertise in developing customised bodies that last and provide whole-of-life cost benefits.
