

## Kraft Engineering

NZTTMF Member Since: 1989

Established in 1977, Kraft Engineering is a leading manufacturer of quality log transport equipment. With industry stalwart, Graeme Kelly's hands-on approach and innovative ideas, many of which are a first in the logging industry, the company continues to be a leader after 38 years in the manufacturing industry.

Known for their commitment to provide customers with the most up-to-date technology and with an understanding what their equipment goes through, Kraft builds durable long-lasting units that can handle the extreme stress and punishment that these units endure.

An example of their latest unit is the Krafty Super B. The Krafty Super B is said to be the longest truck on New Zealand roads. These units are 24.8 meters and can haul an impressive 62.8 tonne.

The Super B is available as with three 20 ft. containers or one 20 ft. container and one 40 ft. container. These units are able to take the payloads of up to 42 tonne.

Kraft designs all their trailers in-house and tailors the units to meet individual customer requirements, and then proceed to manufacture those trailers in their fully-equipped workshops.

Their trailers successfully meet market demands and most importantly customer satisfaction.

Kraft Engineering also offers Pacific Scales for trucks and a profiling service for anyone wishing to get good clean cuts.

**WHO:** Kraft Engineering Ltd.

**WHERE:** 3 Wikaraka Street, Ngongotaha, Rotorua.
