

Lusk Engineering Ltd

NZTTMF Member Since: 2002

Opinions may differ but there are usually three main qualities constituting a solid operation in our industry: longevity of service, quality work, and repeat business. There is a company in Ashburton that claims all three. Dave Lusk's Lusk Engineering has been in business for 30 years. That's 30 years in which the company has consistently supplied its customers with quality work, leading to repeat business and word-of-mouth recommendations from a customer base throughout New Zealand. That's good-going for a company that doesn't advertise, and has never had the need to. It's called track record, and it is a powerful tool in the right hands.

Dave and his eleven-strong team turn their expert hands to most types of transport engineering, including design and customisation, but their core work and reputation are built on aluminium trailer and truck bodies.

Working with aluminium is highly specialised work. In the early days, it was not for the faint-hearted. Even today, with modern technology, it is a skill, a craft.

Lusk Engineering has the technology, and the skill. But, also has the experience, Dave's been in the transport business for 48 years and in his own business for 30 years; Lusk's workshop manager, Les McIntyre, has been with the company for 25 years.

With that experience and skill, they consistently produce trailers and truck bodies noted for their strength and resilience. Some of Lusk's first trailers are still on the road today.

Dave's recommendation to any bulk operator is to give him a call. Have a chat. If it is customisation you want, Lusk Engineering can handle that. If it is a repair, Les is the man to organise that for you. If it is simply an idea you have requiring real craftsmanship to make it a reality, well, there is a great little place in Ashburton that is well worth a visit.

WHO: Lusk Engineering.

WHERE: Ashburton.

WHAT: High performance bulk haulage truck and trailer bodies
