

MF KING

INDUSTRIES LTD.

Petone-based transport and general engineering company, MF King Industries Ltd, has been owned and managed by Phil Wheelans since 2007. In that time Phil and his team have successfully focussed on putting customer requirements front and centre of the companys operations.

For example, their works programme is structured for maximum flexibility allowing them to handle urgent repairs and their servicing side is designed to have truck and trailer units back on the road as soon as possible and without sacrificing on quality.

They are also one of the few companies in New Zealand to give trucking operators the facility of a B-Train length pit, opening the entire truck and trailer unit to complete inspection from all angles and swift servicing.

As a further expression of their customer focus, MF king is the only transport engineering company in Wellington to offer in-house LT400 end engineering certification, speeding up turn-round time at the testing station and cutting cost and downtime for the client.

MF King even offers a pick-up and delivery service, which can result in substantial savings on time and manpower. A relatively recent advent, but one for which MF King is now justly renowned, is the 4-axle tip trailers they build. These tough durable trailers feature Hardox single-piece sides and Hardox single-piece folded floors.

MF King also offers modifications to every kind of body or chassis, box body to curtainsider design and build, extending and shortening wheelbases, complete body builds from new, tipper bodies, curtainsider bodies, box bodies and flat decks.

Add repairing cracks in chassis rails, straightening bent chassis rails, repair cracks in brackets, full axle replacements, certified ferry hooks and tie downs, tow bar and ring feeder manufacturing, and a picture emerges of an engineering company that can offer the transport industry everything it needs in the way of a fast, skilled dependable operator.
