

## Tanker Engineering Ltd

NZTTMF Member Since: 1999

Established in 1990, Tanker Engineering Specialists Ltd has over 25 years experience in the always intricate and often challenging field of tanker fabrication.

The mainstay of their business is the manufacturing and repair of petroleum tankers; though they can and do expand that to include other bulk liquid units, plus storage tanks, vacuum tanks and milk carriers for the New Zealand and Pacific markets.

The company offers an in-house design service to tailor projects to customers' specifications.

That design service is augmented with leading edge welding procedures and equipment, backed by fully certified operators, to provide the highest quality fabrication of finished product.

The company's founder Neil Boys personally oversees all projects.

Current and long-standing clients include Tranzliquid Logistics, Z Energy, BP Oil, Watercare and the New Zealand Fire Service.
