

Ten4

NZTTMF Member Since: 2012

Ten4, originally Intertruck Engineering Northland, is one of Northland's oldest and now largest transport engineering firms.

Transport engineering remains the staple of its business, for which it has earned a reputation as the "go to" company for fleet maintenance, manufacturing and tricky welding and repair jobs.

Ten4 customers are offered a fully-equipped workshop, integrated design hub and no fewer than 22 staff, including 16 qualified engineers and certified welders to meet just about every requirement—big or small, conventional or (ground-breaking) unconventional.

Among the many off-the-rack manufacturing capabilities are drop siders, flat decks, steel and alloy truck and trailer bathtub bodies, transporters, tractor units, draw beams, drawbars, tow bars, crane trucks and road maintenance vehicles.

Repairs and modifications include chassis straightening, wheelbase modification, custom-built accessories, load anchorages, log bolsters and towing connections.

Among other services offered, Ten4 Design can create 2D conceptual drawings, 3D modelling and cutting profiles, design and LT400 certifying. In fact, the company boasts that it can build just about anything for the transport industry, put it on the road and keep it on the road.

It says it can even replicate out of stock or hard to source parts—something that, somewhat surprisingly, is a rapidly growing part of Ten4's business.

Paul Christie is the go-to man for this Northland go-to company.

WHO: Ten4.

WHERE: Whangarei-based, serving all of Northland.

WHAT: Transport, general and design engineers

WEBSITE: <http://www.ten4.co.nz/>

TELEPHONE: 64 9 470 0850.
